

## Extended range with full sets for cars and vans

Elring has extended its range with 21 full gasket sets for high-volume models from the Fiat, Peugeot, Citroën and Renault brands. An important criterion for selection of the engines was that many of these vehicles are predominantly used commercially, which results in high mileage. This means that full gasket sets are required for professional repairs. The Elring Product Management therefore focused on putting together kits with the appropriate content for repairs, which means that they do not include cylinder head gaskets.

It has become a standard for Elring that almost all kits are presented as a high resolution image in the online catalogue. This also applies to individual gaskets. So one can be sure the gaskets needed are included. The necessary cylinder head gasket and screw sets can also be found in the catalogue, along with the relevant piston protrusion specifications.
